Premium Positioning to Support GOFAR Tour 2026 at Field Day Spain with Live GNSS Demonstration Capabilities

Utrecht, The Netherlands / Madrid, Spain, [Date]

Premium Positioning BV, a provider of multi-network GNSS correction services, today announced its participation in the GOFAR Tour 2026 as a technical partner for Field Day Spain, taking place on April 15th in Madrid.

Organized by the Global Organization for Agricultural Robotics (GOFAR), the event brings together agricultural robotics companies, farmers, and industry stakeholders to showcase real-world solutions through live, field-based demonstrations.

In this context, Premium Positioning will provide exhibitors with access to its GNSS correction network, enabling real-time, high-precision positioning throughout the demonstrations. By ensuring consistent accuracy and reliability in the field, participating companies will be able to showcase their robotics solutions under true operating conditions.

To support this further, Premium Positioning will be present on-site during Field Day Spain, offering direct technical assistance and ensuring the smooth operation of GNSS-dependent applications across the demo zones.

“GOFAR creates a unique environment where innovation meets real-world agricultural needs,” said Peter Gerritsen, CEO of Premium Positioning. “By supporting Field Day Spain, we enable companies to demonstrate their solutions with reliable, high-precision positioning in real conditions, which is critical to accelerating adoption. This initiative aligns with our mission to deliver precise positioning for everyone, everywhere, anytime.”

More broadly, this collaboration reflects Premium Positioning’s commitment to supporting the agricultural robotics ecosystem by providing the infrastructure needed to bridge the gap between innovation and real-world deployment, while making high-precision positioning more accessible across industries and geographies.

About GOFAR

GOFAR (Global Organization for Agricultural Robotics) is an international non-profit organization dedicated to accelerating the development and adoption of agricultural robotics. Through field demonstrations, industry events, and global collaboration, GOFAR connects solution providers with farmers and key stakeholders to address major agricultural challenges, including labor shortages, sustainability, and productivity.

About Premium Positioning

Premium Positioning BV is a provider of multi-network GNSS correction services, delivering centimeter-level accuracy through a single subscription. With global coverage and a network of more than 7,500 reference stations, Premium Positioning enables professionals worldwide to access reliable, high-precision positioning without being tied to a single network or provider. The company's mission is to make precise positioning accessible for everyone, everywhere, anytime.
