GOFAR Tour 2026: SABI AGRI continues its European rollout with the Madrid Field Day and unveils a new version of its SRBC robot

After a successful first participation in France, SABI AGRI is continuing its European expansion and will showcase its SRBC robot in a new operating context: Spanish vineyards and orchards. At the GOFAR Field Day in Madrid on April 15, the company will also unveil a new four-wheel-drive version of the SRBC robot, highlighting the modularity of its innovation for agricultural robotics that is accessible, high-performing, and adapted to real field conditions.

The SRBC robot takes on Spanish orchards at the GOFAR Field Day

SABI AGRI developed the SRBC robot with a clear objective: to democratize agricultural robotics by offering a solution that is both technically and financially accessible to farms, starting from €13,500 (excl. VAT).

After demonstrating its capabilities in market gardening at the GOFAR Field Day in Toulouse (France), the SRBC robot continues its deployment and will now showcase its performance in orchards at the GOFAR Field Day in Madrid (Spain).

On this occasion, SABI AGRI will unveil a new version of the SRBC robot, complementary to the tracked version: **the four-wheel-drive version**.

True to SABI AGRI's DNA and designed to meet farmers' needs, **this complementary version alongside the tracked model** fully highlights the modularity of the SRBC robot, capable of adapting to a wide variety of crops and field conditions.

"With this new four-wheel-drive version, we are providing a complementary solution to better address the diversity of field needs. It enables us to cover a wider range of cropping situations, particularly those requiring more power, such as work in vineyards and orchards. This evolution further strengthens the SRBC's ability to adapt to the realities of farming operations."

Alexandre Prévault Osmani, President and Co-founder

Key highlights of the day

"The GOFAR Field Day in Spain is a particularly relevant opportunity to unveil this new version of the SRBC. The demonstration site, rich and diverse in orchards and vegetable crops, allows us to concretely showcase the robot's full potential. It is also a high-potential market for these applications, making this event strategic for SABI AGRI."

- Alexandre Prévault Osmani, President and Co-founder

Throughout the day, **two SRBC robots** will be deployed to concretely demonstrate the solution's capabilities through several key sequences:

- **Live demonstrations in real conditions**, across raised-bed crops, vineyards, and orchards. The robots will operate in the field to highlight their performance, versatility, guidance precision, ease of use, and ergonomics in a variety of agricultural contexts.
- **Robot parade**, where the SRBC will take part in a dynamic collective demonstration.

Come and discover the SRBC robot at GOFAR Spain and meet the SABI AGRI team.

Practical information

Date: Wednesday, April 15, 2026

Time: 10:00 AM – 6:00 PM

Location: John Deere Parla Innovation Center

John Deere Ibérica, S.A.

Bulevar John Deere nº2

28984 Parla (Madrid), Spain

ABOUT SABI AGRI

SABI AGRI is a French family-owned company pioneering the design and manufacturing of 100% electric agricultural tractors and robots.

Founded in 2017 by Laure and Alexandre Prévault-Osmani, the company is now recognized as an expert in off-road electrification applied to agricultural vehicles, with more than eight years of experience in developing robust, versatile electric technologies tailored to real field conditions and farmers' needs.

By placing innovation and sustainability at the heart of its activities, SABI AGRI's mission is to transform machines in order to transform agricultural practices, moving towards a model that is more respectful of both the environment and people.

With numerous awards and recognitions, SABI AGRI stands out as the French leader in agroecological equipment and continues to shape the future of electric farming.
