TiMOTION Europe inaugurates its new showroom

A 350 m² space dedicated to partner engagement and showcasing innovative solutions

TiMOTION Europe is proud to announce the opening of its new showroom, a 350 m² space officially inaugurated on Tuesday, December 9, 2025. It is now the largest showroom across all TiMOTION subsidiaries, marking an important milestone in the company's European presence and strengthening its relationships with partners.

A space designed to welcome and foster connections

The showroom has been designed as a true meeting and exchange space, intended to host clients, prospects, distributors, and other partners for appointments, visits, and professional events. More than just an exhibition space, it serves as a commercial tool for TiMOTION clients.

The aim is to provide an environment conducive to dialogue, discovery, and collaboration. By welcoming partners in an immersive and inspiring setting, TiMOTION seeks to strengthen proximity, improve understanding of their needs, and encourage the development of new joint projects.

Highlighting TiMOTION's strength: customization

One of TiMOTION's key assets is its ability to offer highly customizable linear electric motion solutions. The showroom has been designed as an educational and demonstrative tool, allowing visitors to see firsthand how this customization takes shape with TiMOTION solutions integrated into real-world applications, while highlighting new products and the latest innovations developed by TiMOTION.

By presenting products in real-life conditions, visitors can better appreciate the value of TiMOTION solutions, visualize integration possibilities, and more easily envision their own projects.

Four areas dedicated to key markets

The showroom is organized into four dedicated zones representing TiMOTION's main markets:

- **Ergo Motion:** solutions for ergonomic workplace design, including sit-stand desks
- **Care Motion:** solutions for medical and care environments
- **Comfort Motion:** systems for comfort in homes and adjustable furniture
- **Industrial Motion:** solutions for industrial applications: agricultural machinery, opening or shading systems for buildings, material handling, pergolas, etc.

Several products are displayed in real-life settings to enhance visitor immersion and allow hands-on experience of the solutions' benefits.

"This showroom is a great source of pride for all our teams. It represents a significant investment that reflects our commitment to sustainable growth in Europe and demonstrates the confidence placed in us by our parent company," said Nicolas Martin, Director of Administration & Operations, TiMOTION Europe.

A space dedicated to training

The showroom also includes a training area, intended for both TiMOTION employees and clients or partners. This space will host training sessions, technical presentations, and workshops, supporting knowledge sharing and skill development around TiMOTION products and solutions.

Inspiring to build the future together

Through this new showroom, TiMOTION reaffirms its commitment to go beyond simply presenting products. The goal is to inspire partners, stimulate creativity, and lay the foundations for long-term collaborations to develop tomorrow's projects together.

This space fully embodies TiMOTION's commitment to placing innovation, customer proximity, and quality relationships at the heart of its strategy.

"This showroom is a first within the Group and illustrates a new way of working with our clients, based on exchange and inspiration. Given its scale, TiMOTION Europe is currently our most strategic subsidiary, and what is developed here is intended to inspire our other subsidiaries," said Steven Tseng, General Manager, TiMOTION Group.

About TiMOTION

Founded in 2005, TiMOTION designs and manufactures innovative electric actuation solutions for a wide range of sectors, including medical, ergonomics, comfort, and industrial applications. Thanks to its technical expertise, customization capabilities, and international network, TiMOTION supports equipment manufacturers in developing high-performance products tailored to their needs.
